

Sustainable Food Production (SFP)

SFP.H3K Understand how to improve environmental performance

Unit Summary

This unit is about understanding how to develop and plan improvements to environmental performance. The standard looks at the planning, implementation and review of improvements to environmental performance.

Related Units

This is a knowledge unit which underpins the skills set out in:
SFP.H3S Improve environmental performance

You need to know and understand:

1. The reasons for and benefits of continual improvement of environmental performance
2. Resources required to implement potential improvements to environmental performance
3. The types and sources of information required for planning
4. How to recognise the need for, and obtain, additional expertise and information within the required timescales
5. Ways in which interested parties can be involved in the planning process, and reasons for their involvement
6. The process of developing a measurable, timetabled and systematic implementation plan
7. Potential obstacles to improving environmental performance and how to take these into account during planning
8. The necessary content of plans to improve environmental performance
9. The appropriate presentation of plans for different purposes and different audiences
10. Reasons for monitoring and evaluating the effectiveness of implementation
11. Methods for monitoring and evaluating the effectiveness of implementation
12. Organisational requirements and procedures for monitoring and evaluating implementation
13. The ways in which the results of the evaluation should be communicated
14. The types of documentation required for monitoring and evaluating the implementation of plans

Key Words

Environmental performance	Measurable results of an organisation's management of its environmental aspects.
